ABSTRACT

[Amended] A sod of cultivation soil, complete with lawn grass seeds, fertilizers, selective herbicide and a bonding agent for the cohesion of the various elements contained therein. The sod has the conventional geometric shapes of paving tiles and allows to cover continuously, i.e. without gaps, the soil to be revegetated. A method for producing the sod makes it possible to store it and [subsequent] subsequently reuse it while obtaining optimum and rapid growth, of lawns, grassy layers, flowers and the like.
